

Routine Medical Care

The following will be utilized on all medical emergencies – those requiring Basic (BLS) or Advanced (ALS) Life Support

As scene safety and conditions allow, routine medical care should be completed prior to moving the patient to the ambulance.

¹ Body substance isolation i.e. eye protection (goggles/face shield), respirator/surgical mask, gloves, gown

² Advanced airway equipment, suction, cardiac monitor, and departmental issued ALS gear

³ According to **Spinal Motion Restriction** protocol

⁴ Initial vital signs include: Blood pressure, heart rate, respiratory rate, pain scale, temperature and GCS

⁵ Oxygen Flow Rates:

- Low Flow 2 lpm NC
- Supplemental 4 lpm NC
- High Flow 15 lpm NRB or BVM
